

Wordpress 2.6.3.

Instalacija za totalne početnike

Riječ autora:

Ovo je samo jedan od načina kako instalirati Wordpress, i ovo je tutorijal za ljude koji se prvi puta susreću sa instalacijom dotičnog.

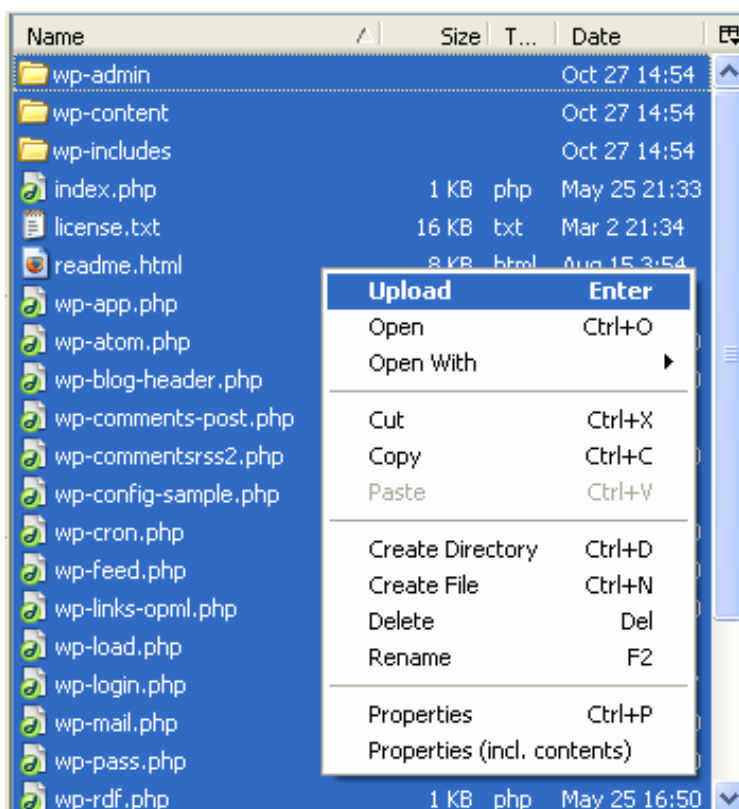

Mnogi će reći da je puno jednostavnije preko Fantastic-a iz cpanel-a, ali iz osobnog iskustva znam kako na taj način može doći do određenih problema i preporučam instalaciju opisanu u ovom malom tutorijalu.

Prvo odemo na <http://wordpress.org/download/> i preuzmemo zip datoteku:

Kada smo preuzeli datoteku lijevim klikom miša otpakiramo zip datoteku..

Zatim pomoću svog omiljenog FTP Programa (Fire FTP će dobro doći - <http://fireftp.mozdev.org/>) upload-amo sve iz mape „wordpress“ na server:

Dok se upload-a, odemo u cpanel npr. www.vasa-domena.com/cpanel, te kliknemo na MySQL Databases, zatim Create New Database.

Upišemo proizvoljno ime za bazu te kliknemo „Create Database“

Create New Database

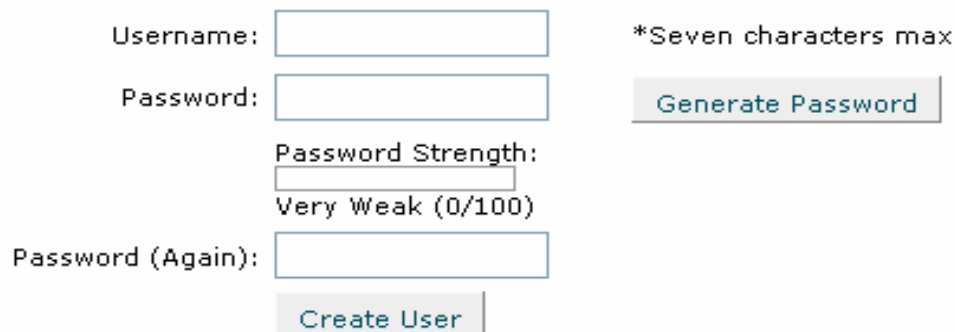

New Database:

Kreiramo korisnika-a i lozinku, te dodamo korisnika bazi

MySQL Users

Add New User

Username:

Password: *Seven characters max

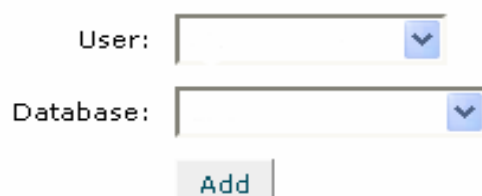

Generate Password

Password Strength: Very Weak (0/100)

Password (Again):

Create User

Add User To Database

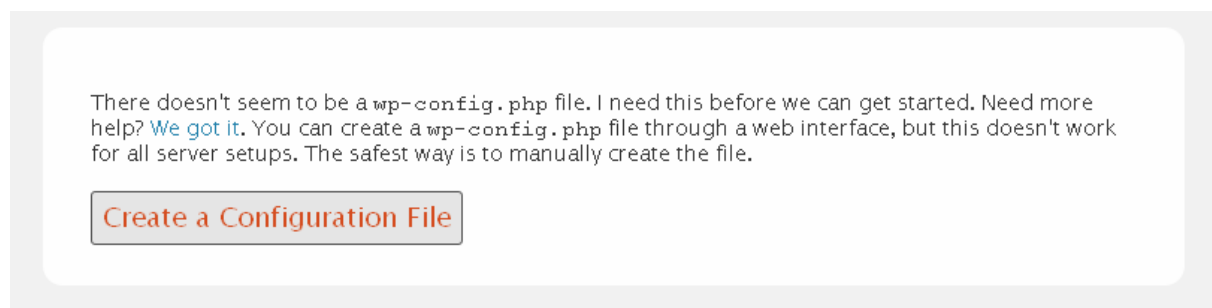

User:

Database:

Add

Ok, izlazimo iz cpanel-a, te u browser upisujemo adresu gdje će se naš budući blog nalaziti, npr. www.vasa-domena.com, dobivamo slijedeću poruku na koju samo kliknemo „create a Configuration File“

There doesn't seem to be a `wp-config.php` file. I need this before we can get started. Need more help? [We got it.](#) You can create a `wp-config.php` file through a web interface, but this doesn't work for all server setups. The safest way is to manually create the file.

Create a Configuration File

Klik na „Let`s go!“

Welcome to WordPress. Before getting started, we need some information on the database. You will need to know the following items before proceeding.

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

If for any reason this automatic file creation doesn't work, don't worry. All this does is fill in the database information to a configuration file. You may also simply open `wp-config-sample.php` in a text editor, fill in your information, and save it as `wp-config.php`.

In all likelihood, these items were supplied to you by your ISP. If you do not have this information, then you will need to contact them before you can continue. If you're all ready...

Ispunimo obrazac sa podacima o bazi koju smo kreirali iz cpanel-a i klik na „Submit“

Below you should enter your database connection details. If you're not sure about these, contact your host.

Database Name	<input type="text" value="wordpress"/>	The name of the database you want to run WP in.
User Name	<input type="text" value="username"/>	Your MySQL username
Password	<input type="text" value="password"/>	...and MySQL password.
Database Host	<input type="text" value="localhost"/>	99% chance you won't need to change this value.
Table Prefix	<input type="text" value="wp_"/>	If you want to run multiple WordPress installations in a single database, change this.

Klik na „Create a Configuration File“

There doesn't seem to be a `wp-config.php` file. I need this before we can get started. Need more help? [We got it](#). You can create a `wp-config.php` file through a web interface, but this doesn't work for all server setups. The safest way is to manually create the file.

[Create a Configuration File](#)

Pod „Blog Title“ upišemo ime našeg bloga, te ispod upišemo naš e-mail, pa klik na „Install Wordpress“

Welcome

Welcome to the famous five minute WordPress installation process! You may want to browse the [ReadMe documentation](#) at your leisure. Otherwise, just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Blog Title

Your E-mail

Double-check your email address before continuing.

Allow my blog to appear in search engines like Google and Technorati.

[Install WordPress](#)

Instalacija završena! Kopirajte si Username i Password negdje... i klik na „Log In“

Upisujete maloprije kopiran Username i Password pa klik na „Log In“

Wordpress je instaliran i spremni ste za dodavanje sadržaja!
